TradeX (TDX)

Whitepaper — Version 1.0 — October 2026

1. Introduction

TradeX (TDX) is an ERC-20 token deployed on the Ethereum network with a fixed total supply of 12,000,000,000 TDX. The project is built around simplicity and verifiability: a standard token contract, a publicly verified source code, and an open liquidity pool where the token can be traded. This document describes what TDX is, how it is deployed, and what holders should know before interacting with it.

2. Token Overview

Name	TradeX
Symbol	TDX
Standard	ERC-20
Network	Ethereum Mainnet
Total supply	12,000,000,000 TDX (fixed)
Contract address	0xE596E08D7261b2Ae6D94146ffA11be34723d3cEa
Contract verification	Source code verified on Etherscan
Website	https://tradextoken.vercel.app
Official X account	@TDXERC20

3. Supply

The total supply of TDX is fixed at 12,000,000,000 tokens, defined when the contract was deployed. Because the contract source code is verified on Etherscan, anyone can read the code and confirm the supply directly on-chain rather than relying on statements from the project.

4. Trading and Liquidity

On 4 October 2026 a Uniswap v4 liquidity pool for the TDX/USDT pair was created on Ethereum, allowing TDX to be traded openly on a decentralized exchange. Trading takes place directly from users' wallets; the project does not custody user funds. Token prices are set by the market and can

change quickly.

5. Use of the Token

TDX is a standard ERC-20 token. It can be held in any Ethereum-compatible wallet, sent between addresses, and traded on decentralized exchanges. At this stage TDX does not give holders any ownership, profit share, voting rights or guaranteed utility. Any future use cases will only be announced through the official website and X account once they actually exist.

6. Transparency

The project aims to keep all key information publicly checkable: the contract address and verified source code on Etherscan, the liquidity pool on Uniswap, and the official website and X account, which all reference the same contract address. Holders should always confirm the contract address above before buying, as copies and imitations of tokens can exist.

7. Roadmap

The project does not make fixed promises about dates or outcomes. Current priorities are:

- Keep token information (logo, links, description) accurate on Etherscan, wallets and price-tracking websites.
- Maintain and improve the official website and documentation.
- Share updates through the official X account.
- Grow the community in a transparent way.

8. Risk Disclaimer

Crypto assets are volatile and carry a high level of risk, including the risk of losing the entire amount you spend. TDX is not an investment product, and nothing in this document is financial, legal or tax advice or a promise of profit. The value of TDX depends entirely on market demand and may fall to zero. Smart contracts and blockchain networks can contain bugs or be affected by factors outside the project's control. Do your own research and never spend more than you can afford to lose. Check the laws that apply to you before buying or trading crypto assets.
